

GO WITH COCO

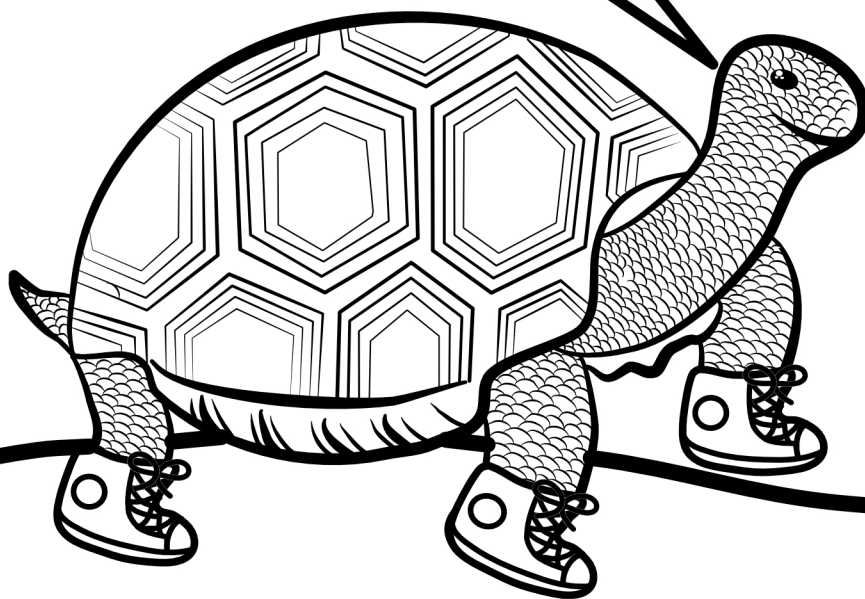

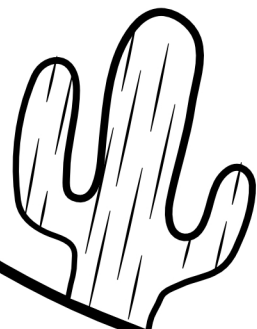

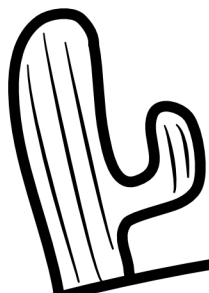

to visit the Tooth Fairy!

Illustrated by

(your name here)

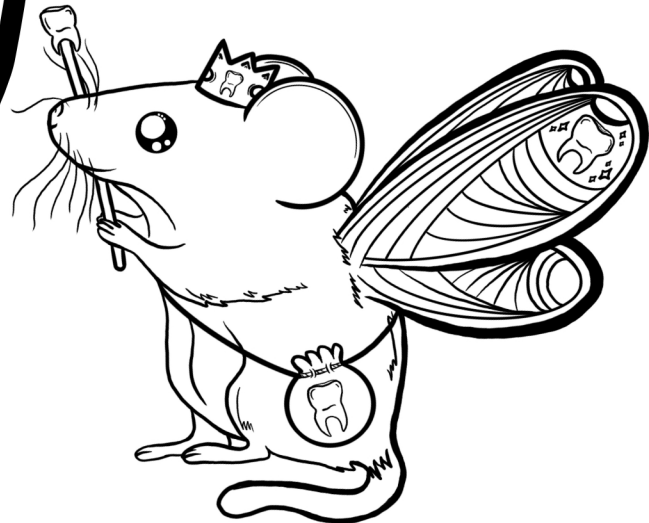

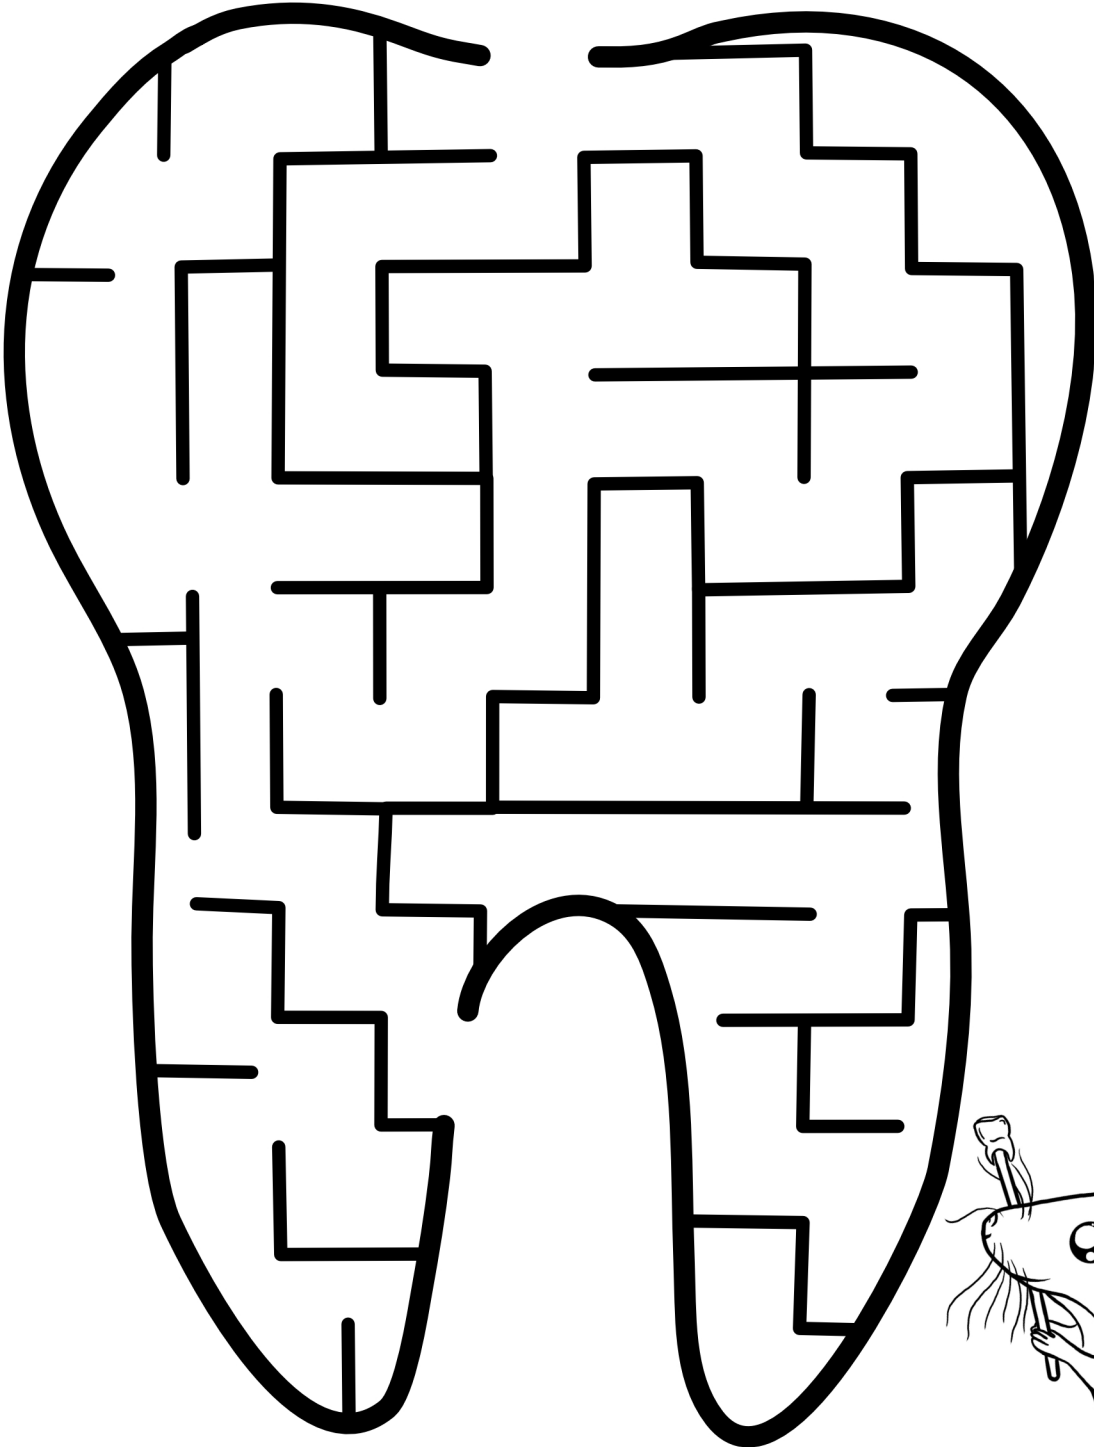

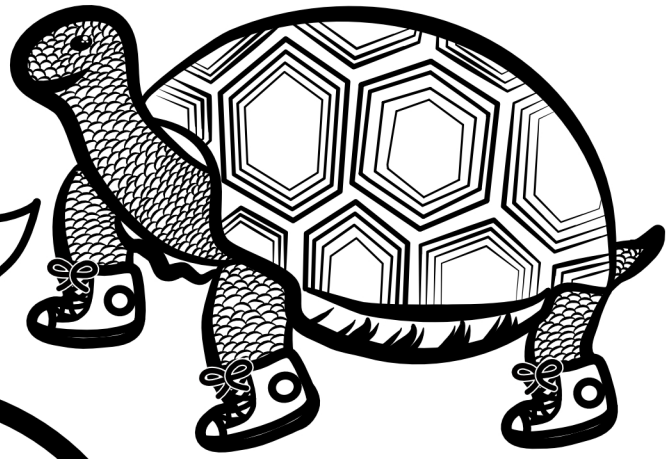

Hi, I'm Coco! I lost my tooth today so I'm going to bring it to the tooth fairy. Will you come with me?

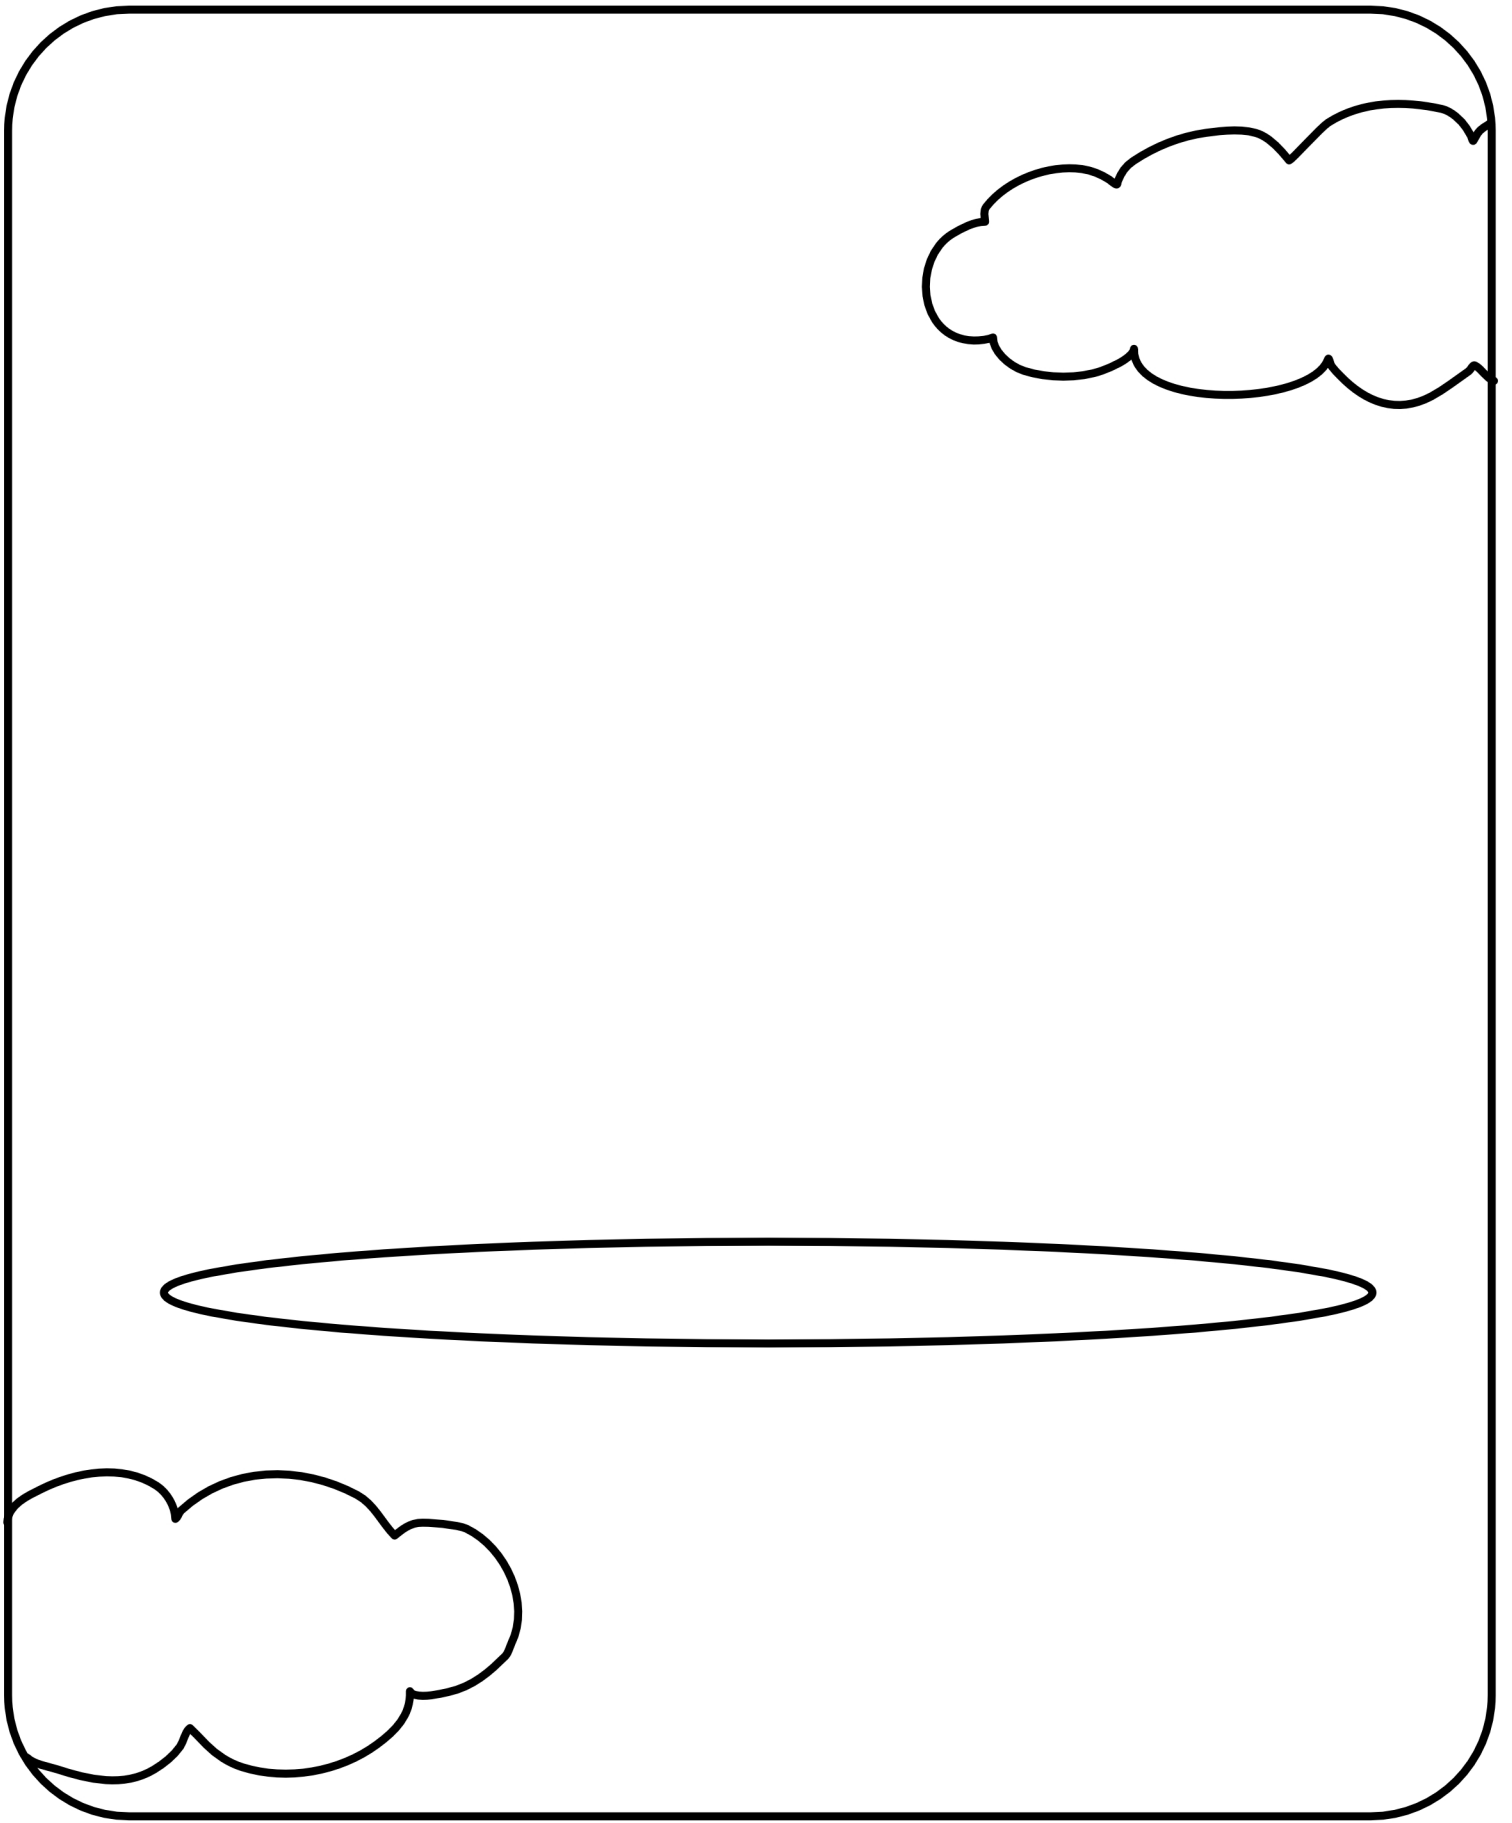

Tortoises and other animals that come from eggs sometimes have an "egg tooth" to help them hatch from their eggs.

Help me find
the tooth fairy!

Draw the Tooth Fairy's Palace

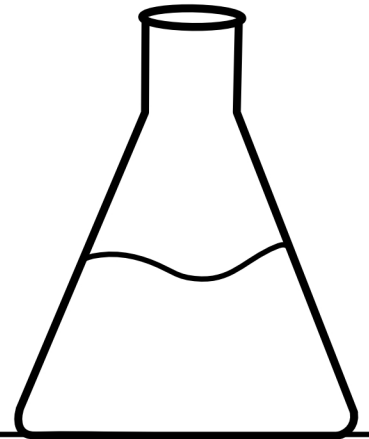

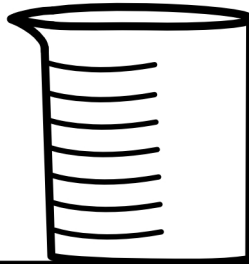

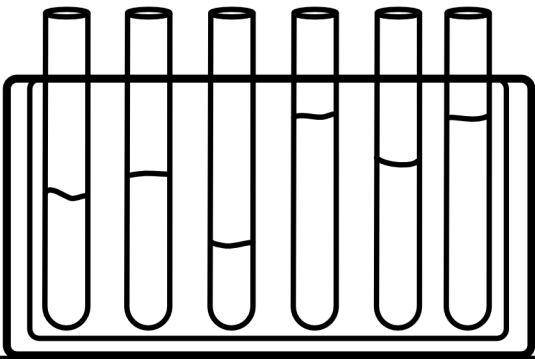

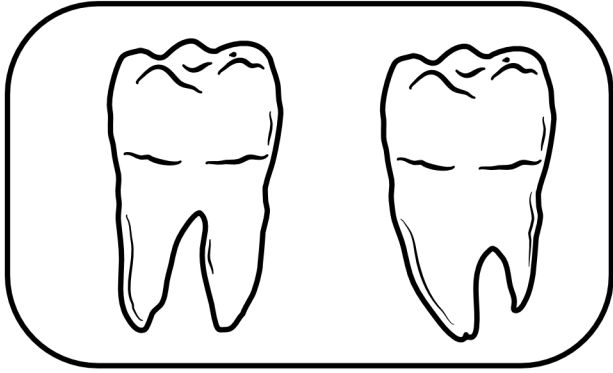

Did you know that the top part of your tooth is covered by tooth enamel, the hardest substance in the human body?

Did you know that baby teeth hold the space for our grown up teeth? Once grown-up teeth are fully developed and ready for action, they come in to that spot!

We are interested to find out what's inside your baby teeth, like minerals and other substances.

TOOTH RESEARCH LAB

Thanks for visiting, Coco!
Your tooth will help with
my research! Next time
you can just leave it
under your shell when
you go to bed and I'll
come get it.
